CAPSTONE PROJECT · CUSTOM ASSISTANT TRACK

CV Tailor

Drafts my CV for every job posting from my own facts only, and puts what I don’t have on a list of gaps

Rakan Saeed · SDAIA Academy · Generative AI for Productivity

Every posting needs a tailored CV, and mistakes are costly

The task today

Paste my CV and the posting into ChatGPT, then check its reply line by line for anything untrue

Time before

About 7 minutes per posting (6.71 and 7.36), timed, review included

Frequency

About 8 postings a month (my estimate); many graduates do the same task

10 unsupported claims an ordinary chat added to my CV for one IT support posting, including helpdesk duties I never did and Windows

Source: messy test case without the assistant (test log) · times from the stopwatch, 21 Oct 2026

Every line in the draft carries a fact ID from my file

A professional facts file: **F01–F14** are what I have; **N01–N08** are what I never claim.

The assistant matches each requirement to an ID and writes from IDs only. A requirement with no ID goes to **Gaps**.

Why a custom assistant? A fixed source and a request that repeats in the same shape. A plain chat prompt added what I don’t have.

FROM A TEST OUTPUT

```
Designed and built a complete enterprise
network in a network simulator. [F10]

Served as IT Intern at MEWA for 4 months.
[F03]
```

Gaps: Windows 10/11 and Active Directory · N01 · not claimed

The app matches and drafts; I verify, decide and send

1 · Posting	2 · Match	3 · Draft	4 · Checker	5 · Line check	6 · Send
Me	App	App	Automatic, 7 checks	Me, line by line	Me only

A failure at step 4 or 5 goes back to step 3 with specific feedback, or I fix it by hand. Any tag means I stop and decide.

What stays with me

Update the facts file, match every line to its ID, fix generalizations, decide to apply, add my details, send

Never rules and tags

5 Never rules and 5 tags: rule-breaking request, low fit, instructions inside posting, possible scam, contradictory posting

Live demo: one messy IT support posting, twice

Without the assistant

`Provided IT support in a government organization environment`

`Assisted with troubleshooting hardware and software issues for end users`

`Operating systems: Windows, Linux basics`

Invented internship duties and skills I don’t have

With the assistant

[Contradictory posting]: “0-2 years” vs “minimum 2 years”

`Served as IT Intern, MEWA, for 4 months. [F03]`

Gaps: Windows and Active Directory (N01), Git (N03)

Checker: 7 of 7, then I fix one generalized line by hand

1 · Plain chat | 2 · Assistant | 3 · Checker | 4 · My fix

Text taken from the actual test outputs · fictional posting · no personal data on screen

Zero claims after my review in all three cases, and one real failure fixed by one change

Case	Without the assistant	With the assistant
Typical	8 claims + the city	0 claims, CCNA under Gaps
Messy	10 claims, 3 invented duties	0 by checker; 1 generalization I fixed
Edge	Refused; 2 embellishments	3 tags, 0 claims

What failed

Version 1 replied in 1100 words on the messy case: too long to review quickly

The one change

A 550-word length rule: 1100 → 605 (–45%). Final runs: 522, 578, 555 words

Source: isolated test runs · automatic checker + line-by-line review · test log

About 7 minutes became 3, and no false claims reached my CV

56%

time saved on average, review included (54.8% and 57.7%)

6 → 0

false claims left after my own review: plain ChatGPT vs the assistant

Metric	Before (B1 · B2)	Trial 1 (T1)	Trial 2 (T2)
Minutes, review included	6.7 · 7.4	3.0	3.1
False claims in the reply	6 · 11	0	0
Acceptance criterion met	No · No	Yes, first time	Yes, first time

Source: stopwatch page, 21 Oct 2026 · before = plain ChatGPT + my review · one person, two trials · details in the report, section 7

No line enters my CV without a fact ID I checked myself

Worst case

A CV in my name with a skill I don’t have, exposed in the interview

Controls

N list, an ID on every line, the checker, my review, sending is mine only, no connectors

Data

No name, phone or email uploaded; ID and bank details never

Day 1

Use it for my next real application and log the time

Week 1

Version 3 (a “no generalizing” rule), and a classmate tests it

Month 1

3 real applications, each logged, then decide

Faster drafting, honest content, and the decision stays with me

If the app disappeared tomorrow, the facts file, the instructions and the checker remain, and move to any app in minutes

AI disclosure: this presentation was prepared with AI assistance in building, testing and drafting. Rakan reviewed the numbers against the raw test files and the measurement sheet, and takes responsibility for its content.
